

Database Design Exercises

Create the database tables

We are a restaurant that needs a website where customers can view our menu and send their orders online.

Here is our menu:

Burgers	
Hamburger	P60
Cheeseburger	P75
MegaBurger	P150

Rice Meals	
1 pc Fried Chicken	P80
2 pc Fried Chicken	P135
Burger Steak	P90

Dessert	
CheeseCake	P120
Halo-halo	P50
Turon	P20

Add-ons	
Extra Rice	P15
Soup	P30

And for our customer, he needs to have an account first. We need to know the following:

- Name of the customer
- Delivery Address

And for the account

- Username
- Password

The customer will sign in using his username and password.

Chooses which items to buy and the quantity of each item.

Then proceeds to checkout to submit his order.

For the restaurant staff, he also needs to login with username and password.

Once logged in, he can view the orders of all the customers and update the database once the order is completed.
